

Solar architect Garry Baverstock works with children at Maddington primary school last week.

Gifted children study world of solar energy

Twenty gifted and talented children at Maddington primary school are studying the intricacies of solar energy.

And some of the ideas they have put forward to date has surprised even their teacher, Debbie Osborne.

"The children have shown plenty of imagination throughout the

and asked each student to prepare plans and designs on game construction.

Last week he re-visited Maddington Primary to see the results and said he was surprised at the quality of the designs.

"The children have ideas

that are totally different to what an adult might conceive. One can really learn a lot from them," Mr Baverstock said.

The class of year six students recently spent a full day at WAIT broadening their knowledge on solar energy.
